DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1,3,5 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Patel '521.

Patel '521 shows a spray cooling apparatus which controls mass flow rate (see lines 37-54 of column 5) in accordance with the sensed temperature of an electronic device.

Line 36 of column 2 states that "fluorinert" a well known dielectric cooling fluid may be used.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein

Art Unit: 3744

were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 2 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Patel '521 in view of McDunn et al (6,215,166).

Patel '521 discloses applicants' basic inventive concept, a spray cooling system which cools an electronic device according to the sensed temperature of the device, substantially as claimed with the exception of controlling the power to the device in accordance with the sensed temperature. McDunn et al show this feature to be old in the electronics spray cooling art in column 1 lines 49-57 and in column 2 lines 30-38. It would have been obvious to one of ordinary skill in the art at the time of applicants' invention from the teaching of McDunn et al to modify the spray cooling system of Patel '521 by controlling the input power to an electronic device according to its temperature to prevent overheating and possibly damaging the electronic device.

Claims 4 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Patel '521 in view of Tilton '700.

Patel '521 discloses applicants' basic inventive concept, a spray cooling device for cooling electronics which controls the spraying in accordance with the detected temperature of the electronics, substantially as claimed with the exception of using a non-dielectric fluid as the coolant. Tilton '700 shows this feature to be old in the

Art Unit: 3744

electronics spray cooling art in lines 46-48 of column 3. It would have been obvious to one of ordinary skill in the art at the time of applicants' invention from the teaching of Tilton'700 to use a non-dielectric cooling fluid to provide an inexpensive coolant (water or a coolant with a low temperature (liquefied gas).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William C Doerrler whose telephone number is (571) 272-4807. The examiner can normally be reached on Monday-Friday 6:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Denise Esquivel can be reached on (571) 272-4808. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
